Description

Is it a warm day in Athens?

Do you know that you are likely to be at high risk when you travel to the city?

Find the closest to you cool spots in Athens!

Caution! Extreme temperatures are a major cause of health problems and a high statistical risk of mortality. Timely real time information during extreme weather events can prevent the consequences. The EXTREMA Athens application uses satellite data in conjunction with atmospheric models to locate the most affected areas in real time. The City of Athens proposes a network of cool spots where residents and visitors of the city can be relieved during extreme temperatures. EXTREMA Athens evaluates your personalized thermal risk in real time, at your location and if it is high, warns you. It also gives you instructions on how to respond to high temperatures in Athens and informs you of the coolest spots near you.

EXTREMA Athens gives you information about:

- The potential risk: Personalized thermal risk for your current location and suggestions for appropriate risk mitigation measures.
- Cool spots: Information, opening hours, and directions to go to the nearest cool spot as well as suggestions to choose the most suitable for you.
- Multiple user profiles: Multi-user support. This feature is particularly useful when you want to protect your elderly relatives: just enter your profile and location and get estimates of the potential risk they are experiencing).

For more information, visit the page: <https://extrema.space/> or follow EXTREMA on twitter: @EXTREMA_proj

EXTREMA is a service within the "100 Strong Cities" (www.100resilientcities.org; under the auspices of the Rockefeller Foundation).

EXTREMA Athens is a priority program within the framework of the Strategic Resilience of Athens.
